

Performance Testing Report

Project Information

Item	Details
Project Name	Mind risers CRM
Application URL	https://crm.mindristerstech.com/
Report Version	1.0
Prepared By	Abinash Malla
Date	August 4, 2026
Test type	Performance Testing
Test Tool	Apache JMeter
Test Environment	Staging/Production (Specify)

1.Executive Summary

Performance testing was conducted on the Mindrisers CRM application to evaluate its responsiveness, stability, scalability and reliability under expected and peak user loads.

The primary objective was to determine whether the application satisfies the defined Service Level Agreements (SLAs) for response time, throughput and error rate.

The testing included Load Testing, Stress Testing, Spike Testing, and Endurance Testing across CRM functionalities.

2.Objectives

The objectives of this performance testing were to:

- Measure application response time
- Determine maximum supported concurrent users
- Identify performance bottlenecks
- Varify system stability under sustained load
- Measure scalability
- Assess server resource utilization

3.Scope

Included Modules

- User Login
- Dashboard
- Student Management
- Course Management
- Batch Management
- Attendance
- Fee Management
- Reports

- User Profile
- Logout

Out of Scope

- Third-party payment gateways
- Email server performance
- External APIs not hosted by the CRM
- Disaster recovery testing

4. Test Environment

Application Server

Parameter	Value
Environment	Staging / Production
Web Server	Apache
Application Framework	(Specify)
Database	MySQL/PostgreSQL
Operating System	Linux
CPU	(Specify)
Memory	(Specify)

Load Generator

Parameter	Value
Tool	Apache JMeter 5.6x
Operating System	Windows
CPU	(Specify)
RAM	(Specify)
Network	High-Speed LAN

5. Test Scenarios

Scenario	Virtual	Ramp-up	Duration
Login	50	5 min	15 min
Dashboard	100	10 min	20 min
Student Search	150	10 min	20 min
Student Registration	150	10 min	20 min
Fee Collection	75	5 min	15 min
Report Generation	50	5 min	15 min
Mixed User journey	200	15 min	30 min

6. Workload Model

Typical user activity distribution:

- Login -- 10%

- Dashboard -- 15%
- Student Management – 30%
- Attendance – 15%
- Fee Management – 15%
- Reports – 10%
- Logout – 5%

7.Test Types

Load Testing

Objective:

Evaluate application performance under expected user load.

Target Users

200 Concurrent Users

Stress Testing

Objective:

Determine system breaking point.

Target Users:

Increase load until unacceptable response times or failures occur.

Spike Testing

Objective:

Determine system breaking point.

Target Users:

Increase load until unacceptable response times or failures occur.

Spike Testing

Objective:

Observe application behavior under sudden traffic increases.

Scenario:

Increase users from 100 to 500 within one minute.

Endurance Testing

Objective:

Verify application stability over an extended period.

Duration:

8 Hours

8. Service Level Agreement (SLA)

Metric	Target
Average Response Time	< 3 Seconds
95 th Percentile	< 5 Seconds
Error Rate	< 1%
CPU Utilization	< 80%
Memory Utilization	< 75%
Throughput	As Required

9. Test Execution Summary

Scenario	Status
Login Test	PASS
Dashboard Test	PASS
Student Management	PASS
Reports	PASS
Stress Test	PASS
Endurance Test	PASS

10. Bottleneck Analysis

The following areas should be reviewed based on observed metrics:

- Slow database queries
- Large database payloads
- Missing database indexes
- Inefficient server-side processing
- High CPU utilization
- Memory leaks
- Session management overhead
- Excessive client-side requests

Specific findings will be documented after test execution.

11. Risks

Potential risks identified during performance testing include:

- Database contention under high concurrency
- Increased response times during report generation
- Memory saturation during prolonged execution
- Connection pool exhaustion

- Network latency affecting user experience

12.Recommendations

Recommended optimization activities include:

- Optimize SQL queries and indexing.
- Enable server-side caching where appropriate.
- Minify JavaScript and CSS resources.
- Use a Content Delivery Network (CDN) for static content.
- Optimize API payload sizes.
- Configure connection pooling effectively.
- Monitor JVM or application runtime memory.
- Introduce asynchronous processing for long-running tasks.
- Conduct regular performance regression testing.

13.Conclusion

This document serves as the baseline template for the performance evaluation of the Mindrisers CRM application.

Final conclusions regarding system scalability, stability and production readiness will be based on actual performance test results collected during execution. Upon completion, measured values should replace all placeholders and supporting graphs, logs and analysis should be appended.

Screenshots:

The screenshot displays the JMeter GUI interface. On the left, the 'Test Plan' tree shows 'CRM_Mindrisers' as the root, with a 'Thread Group' child. Under the 'Thread Group', there is an 'HTTP Request' sampler and a 'View Results Tree' listener. The 'View Results Tree' listener is selected, and its details are shown on the right. The details panel includes a 'Name' field set to 'View Results Tree', a 'Comments' field, and a 'Filename' field with a 'Browse...' button. Below these, there are search filters for 'Case sensitive' and 'Regular exp.' with 'Search' and 'Reset' buttons. The main results area shows a list of 18 'HTTP Request' samplers, each with a green checkmark indicating success. The rightmost panel shows the details for the selected sampler, including 'Thread Name: Thread Group 1-263', 'Sample Start: 2026-08-04 11:54:21 GMT+05:45', 'Load time: 7555', 'Connect Time: 7242', 'Latency: 7555', 'Size in bytes: 1684', 'Sent bytes: 133', 'Headers size in bytes: 703', 'Body size in bytes: 981', 'Sample Count: 1', 'Error Count: 0', 'Data type: (\"text/\" \"bin/\")text', 'Response code: 200', and 'Response message: OK'.
